

LISTING OF CLAIMS

1. (original) A semiconductor dynamic sensor comprising:

a semiconductor sensor chip having a member movable according to a dynamic force applied thereto, the semiconductor sensor chip outputting a sensor signal in response to an amount of movement of the movable member; and

B1
Cont'd
a substrate for mounting and supporting the semiconductor sensor chip thereon, wherein:
the semiconductor sensor chip is connected to the substrate via an adhesive film.

2. (original) The semiconductor dynamic sensor as in claim 1, further including a package case, wherein:

the substrate is a semiconductor chip having a circuit for processing the sensor signal;

the semiconductor sensor chip is connected to a first surface of the semiconductor chip having the processing circuit; and

a second surface of the semiconductor chip having the processing circuit is partially connected to the package case.

3. (original) The semiconductor dynamic sensor as in claim 1, wherein:

the adhesive film is made of a thermosetting resin or a thermoplastic resin.

4. (original) The semiconductor dynamic sensor as in claim 3, wherein:

a thickness of the adhesive film is less than 50 μm .

5. (Currently Amended) The semiconductor dynamic sensor as in claim 3, wherein:

an elasticity coefficient of the adhesive film is less than 3,000 mega pascal Pascals.

6. (original) The semiconductor dynamic sensor as in claim 1, wherein:
the semiconductor sensor chip is a sensor chip for sensing acceleration.

B' Cont'd
Claims 7 – 8 have been canceled.

9. (Previously Added) A semiconductor dynamic sensor, comprising:
a substrate;
a sensor chip, including a movable member for sensing a dynamic force applied thereto,
for generating sensor signals proportional to an amount of movement of the movable member;
and
a film located between the substrate and the sensor chip for bonding a surface of the
sensor chip with a surface of the substrate.

10. (Previously Added) The semiconductor dynamic sensor of claim 9, wherein the
substrate comprises a circuit chip electrically connected to the sensor chip for processing the
sensor signals generated by the sensor chip.

11. (Previously Added) The semiconductor dynamic sensor of claim 9, wherein the film
comprises one of a thermosetting and a thermoplastic resin film.

Cont'd

12. (New) A semiconductor dynamic sensor comprising:

a substrate;

a sensor chip having a first surface and a second surface, the sensor chip including a movable member provided on the first surface for sensing a dynamic force applied thereto and for generating sensor signals in response to movement of the movable member; and

an adhesive film located between the substrate and the second surface of the sensor chip for bonding the second surface of the sensor chip with a surface of the substrate.

13. (New) The semiconductor dynamic sensor as in claim 12, further including a package case, wherein:

the substrate is a semiconductor chip having a processing circuit for processing the sensor signals;

the sensor chip is connected to a first surface of the semiconductor chip having the processing circuit; and

a second surface of the semiconductor chip having the processing circuit is partially connected to the package case.

14. (New) The semiconductor dynamic sensor as in claim 12, wherein the adhesive film is made of a thermosetting resin or a thermoplastic resin.

15. (New) The semiconductor dynamic sensor as in claim 14, wherein a thickness of the adhesive film is less than 50 μm .

16. (New) The semiconductor dynamic sensor as in claim 14, wherein an elasticity coefficient of the adhesive film is less than 3,000 mega Pascals.

B1
end

17. (New) The semiconductor dynamic sensor as in 14, wherein the adhesive film is further for providing a temperature-dependency of sensor offset outputs that is less than or equal to 50 mV.

18. (New) The semiconductor dynamic sensor as in claim 12, wherein the sensor chip is for sensing acceleration.
